DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, and 11-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 55-141545. JP '545 teaches a stainless steel with improved corrosion resistance. The steel is coated with MnCr_2O_4 with a thickness greater than 500 angstroms. Regarding the thickness, while JP '545 does not specify a thickness within the claimed range, absent a showing of unexpected results, it would have been obvious to one of ordinary skill in the art to provide the oxide in a thickness sufficient to prevent corrosion of the underlying steel. Regarding claim 2, Cr may be 16-19 wt% and Mn, may be less than 1 wt%.

Regarding claims 11-22, these claims are considered intended use and do not further limit the claims.

Allowable Subject Matter

Claims 4-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed December 22, 2003 have been fully considered but they are not persuasive. Applicant state that one would conclude the thickness of JP '545 would be 500 Angstroms.

Art Unit: 1775

The reference teaches a thickness greater than 500 angstroms. Applicant has not addressed this argument of obviousness.

Applicant's arguments have overcome the rejections over Badwal, and the combination of the rejection of JP '545 and Benum.
